2nd Quarter 2001

Vol. 31, No. 2

Census numbers vital in creating labor market information

by Kate Kahle, Research Analyst, Research and Analysis Bureau, Workforce Services Division, Montana Department of Labor and Industry

The universe count of the national population conducted each decade by the Bureau of the Census is primarily intended to apportion seats to the U.S. House of Representatives and for determining legislative

2000 Census highlights:

- Montana's population is shifting to the more heavily urbanized areas of the state. However, some of the largest percent changes in population occurred in more rural counties which have a smaller population overall. Ravalli County was Montana's fastest growing county, with a 44.2 percent change from 1990 to 2000. Broadwater and Stillwater counties both had over 25 percent changes from 1990 to 2000.
- Montana's population grew 12.9 percent during the 90s. The actual numeric increase was the highest since the 1920s. (During the 20th century Montana's population grew 270 percent.)
- New demographic characteristics from the 2000 Census have also been released for Montana. They show that the male versus female population gap decreased since 1990, with approximately 449,500 males, and 452,700 females making up our population. Montana's male population increased 14 percent, while the female population increased 12 percent.
- In 1990, the largest share of Montana's population were "baby boomers" between 25 to 44 years of age. Ten years later, the "baby boomers" still make up the biggest share of the population, but are now between 35 and 54 years of age.
- Montana's Hispanic population grew by almost onethird over the last decade. Native American, Asian, and Pacific Islander populations also grew faster than the state average.

district boundaries, but it is also a rich source of socioeconomic and demographic data in geographic detail. See table on page 3.

In Montana, Census data is used in several ways to create employment and unemployment estimates.

Census population data is used for the following processes in creation of these rates:

- to adjust establishment-based employment estimates to residency-based employment estimates,
- to estimate certain employment and unemployment components in the methodology for creating estimates, and
- to apportion employment and unemployment to each county to create substate estimates of employment and unemployment.

(Continued on next page)

NEW: See Yellowstone County job projections by industry, 1998 - 2008, beginning on page 4.

Census vital for labor market information	1
Yellowstone County job projections	4
Employment and unemployment	11
Jobs by industry	11
Industry news	12
Quarterly tables	14
Glossary of terms	26
Sources of data	27
Population and median age by county	28

Population estimates are also used to create Equal Employment Opportunity data that includes the number of men and women in the labor force, the age distribution of the population, per capita personal income and occupational information. This information can be used to study a given area's economy. See table on page 3.

Looking at the distribution of census population change by county gives clues to what is happening in county economies. This distribution shows clear trends of movement from rural to urban areas.

Industry employment projections are created using census data. This data is added to other data sources to allocate employment for industries that typically work across the state and cannot be classified in one particular county.

Age data is used to project industry employment for industries that serve particular age groups. One example would be hospital employment. Using the historical population age 65 and over, employment needs can be projected using a projection of age 65 and over.

Census data is also used in combination with labor market information to produce allocations for federal funding.

- The Workforce Investment Act provides training to adult, youth and dislocated worker populations.
 Funding is determined by using both census and unemployment data to decide where funding should be allocated based on the highest concentration of unemployment and population.
- Areas of Substantial Unemployment are areas with higher than normal unemployment. Contiguous areas with unemployment over 6.5 percent are given preferential treatment when funding for Workforce Investment Act training is allocated. Census data is used as the source of population for employment and unemployment down to the census tract level.
- The Emergency Food and Shelter National Board Program makes funding available to emergency food and shelter programs to help people in need of emergency assistance. Funding is determined using a combination of census population, census poverty levels and unemployment levels.

These are only some of the ways new census data will be used. So far, population and demographic characteristics have been released. Economic and social characteristics will become available next year, and much more detailed information will be released in the future.

Montana 2000 Census data can be obtained from the Census and Economic Information Center, Montana Department of Commerce. Information is available via the Internet at http://ceic.commerce.state.mt.us/.

Census data for all of the nation can be obtained from the U.S. Census Bureau at http://www.census.gov.

Demographic profiles available

Demographic profiles prepared by the U.S. Census Bureau are available for every state and county in the nation, along with many cities. The profiles provide population distribution by sex, age group, race, Hispanic or Latino ethnicity, and relationship to the householder. They also provide the distribution of households and housing units by household type, housing occupancy and housing tenure.

To find demographic profiles on the Internet, go to http://factfinder.census.gov/ and click on "Demographic Profiles."

Montana Employment and Labor Force Trends is published quarterly by the Research and Analysis Bureau, Workforce Services Division, Montana Department of Labor and Industry.

Editor: Julie Huntington

Questions, comments and suggestions are welcomed, and should be addressed to:

Job projections by industry for Yellowstone County 1998-2008

Yellowstone County's projected

by Phil Brooks, Chief Economist, Research and Analysis Bureau, Workforce Services Division, Montana Department of Labor and Industry

Employment forecast to increase about 1.9 percent per year

Over the period 1998-2008 Yellowstone County employment is forecast to increase about 1.9 percent per year in comparison to the statewide

projected increase of 1.5 percent. Yellowstone County's projected growth rate is higher than the statewide increase partly because of the continued shift of population and employment from rural to urban areas.

Most of the forecast employment increases are in the service-producing segments of both the Yellowstone and Montana economies. Within the service-producing segment, the largest absolute job gains are for business and health services for both Yellowstone County and Montana.

Slow growth is forecast overall for the goods-producing segments of the Yellowstone and Montana economies, with production agriculture payroll jobs projected to decline. The combined agriculture and forestry portion

PLEASE NOTE:

- · Because of the inherent uncertainty in predicting the future, all of the projections presented here should be interpreted as only a general approximation of the true future level of jobs overall or for a given industry.
- · Since most job growth involves wage and salary (payroll) jobs, wage and salary jobs are emphasized.
- · Statewide job projections referenced in this article are available in the Research and Analysis Bureau's Job Projections for Montana's Industries and Occupations, 1998-2008 publication and on the bureau's website at http://rad.dli.state.mt.us/.

of the Yellowstone County economy is forecast to increase modestly only because of the anomaly of including agricultural services as part of this category. This segment of the Montana economy is projected to decline in employment, since production agriculture is more important statewide.

Yellowstone County's annual job growth rate over the 1998-2008 period (1.9 percent) is projected to be less

> than the 2.6 percent annual rate for the previous 10 years. The period 1988-1998 was one of relatively strong growth for Yellowstone County and Montana, consequently one would expect that a single "bestestimate" projection for 1998 to 2008 might show lower growth.

growth rate is higher than the statewide increase partly because of the continued shift of population and employment from rural to urban areas.

About 1.700 additional jobs a year projected through 2008

Roughly 17,000 net additional jobs (difference between jobs created and jobs eliminated) are projected for Yellowstone County between 1998 and 2008-14,000 of which are estimated to be wage and salary jobs and 3,000 of which are projected to be self-employment jobs. This translates to about 1,700 net Yellowstone County jobs per year consisting of both wage and salary jobs (2.0 percent per year) and self-employment jobs (1.8 percent per year). The comparable growth rates statewide are 1.6 percent and 1.5 percent, respectively.

One would expect Montana's largest urban area to grow faster than statewide partly because of the historical movement of people from rural to urban areas and lower growth rates in most Montana rural counties. However, Yellowstone County self-employment jobs are forecast to have a lower growth rate than payroll jobs because some jobs are in production agriculture, which is projected to increase only slightly.

Most job growth in service-producing sectors

As is true statewide, most growth (about 13,000 net payroll jobs) in Yellowstone County is projected to be in the services-producing segment of the economy, which contains industries that do not produce a physical product. The largest service industry growth (2,700 jobs) is forecast for business services. Within this sector, almost all the growth is in the personnel supply (employee leasing), computer services and

telemarketing segments. A relatively large increase (2,000 jobs) is also forecast for health services, which is the largest service sector. Most of this growth is expected to be in hospitals and offices of health professionals. Eating and drinking

places are projected to add about 1,000 jobs over the period. Other large increases are projected for amusement/recreational services (670); wholesale trade involving durable goods (670); motor vehicle dealers, gasoline service stations and parts stores (650); and various social services such as nonmedical residential care, counseling, etc. (610). These service industries represent a mixture of low- and high-paying jobs.

Job growth in goods-producing sectors much smaller

The overall job growth forecast for the goods-producing segment of the Yellowstone County (Billings area) economy through 2008 is much more modest than for service-type sectors. Wage and salary jobs are projected to continue to decline in production agriculture. Forecast job growth for mining is very modest (4 jobs per year), all in oil and gas extraction, which dominates the county's small mining sector. Construction payroll jobs are forecast to continue to grow (88 per year), particularly for special

trade construction contractors, e.g., plumbing, electrical and roofing contractors. Manufacturing is estimated to be basically stagnant in job growth similar to the Montana and U.S. manufacturing sectors.

Please refer to the table on pages 9-10 for broadly-defined industry projections as well as for about 85 specific indus-

tries. Additional detail on 150 Yellowstone County industries is available on request.

Services jobs

Narrowly defined, services (referenced as "other private services" in the table accompanying this article) is a major part of the broader service-producing segment of the Yellowstone County, Montana, and U.S. economies. For Yellowstone County, it is projected to increase by about

7,500 net wage and salary jobs between 1998 and 2008. This increase accounts for more than half the additional

Most growth in Yellowstone

County is projected to be

in the services-producing

segment of the economy.

Health services is expected

to increase by a higher rate

than statewide because

medical services are becoming

more concentrated in the

state's urban areas.

payroll jobs for this time period. (Information in the table on pages 9-10 details the variety of consumer, producer and professional services included in this category.)

Within the narrowly-defined services category, business services is projected to increase by roughly

2,700 wage and salary jobs between 1998 and 2008 (annual growth rate of 5.2 percent), Major components of this sector include temporary help agencies that supply workers to various industries, telemarketing (call centers), computer services and building maintenance services. Growth in this industry is part of a national trend. Computer services is forecast to be the component with the highest growth rate, with the personnel supply subsector forecast to have the largest employment increase of about 1,200 jobs. Average annual wages in 2000 ranged from about \$28,300 for computer and advertising services to roughly \$10,000 for building maintenance, reflecting in part differences in skill levels. Overall, Yellowstone County 2000 wages in business services averaged \$15,800-well below average for the county (\$26,700) and Montana (\$24,300).

Health services is expected to increase by about 2,000 payroll jobs, or an annual growth rate of 2.9 percent, higher than the industry's statewide rate of growth

because medical services are becoming more concentrated in the state's urban areas. This trend is expected to continue. Most of the job growth is forecast for the hospital and health practitioners' office segments of health services. Health services payroll jobs paid an average of \$38,300 in 2000, well above county and statewide averages. Within

health services, annual pay ranged from \$11,900 for home health care services to about \$83,700 on average in a medical doctor's office. Differences in required skills account for much of the pay differences.

Pieces of the low-paying recreation, travel and tourism industry are located within the narrowly-defined services category—namely hotels and other lodging places, and amusement and recreational services. This latter subsector is projected to increase by approximately 700 payroll jobs between 1998 and 2008. Average county 2000 wages for recreational services were about \$12,500. Hotels and other lodging places is projected to increase by about 200 payroll jobs, with 2000 average annual wages being similar to those within recreation services.

Social services is projected to increase by about 600 payroll jobs over the period, or an average of roughly 60 jobs per year. This is partly the result of the national trend toward shifting counseling and residential treatment programs away

from situations where medical doctors are involved. Social services includes nonmedical individual and family social services, nonmedical residential care, child day care services—and job training and vocational rehabilitation services. Wages for 2000 in this sector averaged about \$16,000.

The narrowly-defined services category also includes the engineering and management services sector, which is projected to increase by roughly 500 payroll jobs through 2008. The sector is the second highest paying segment of narrowly-defined services. Legal services paid the highest, with \$42,500 average pay for Yellowstone County in 2000. Engineering and management services paid \$39,300 on average.

Retail trade jobs

Retail trade (a portion of the service-producing sector) is projected to add a total of about 260 payroll jobs yearly to Yellowstone County's economy between 1998 and 2008, accounting for roughly 20 percent of total additional payroll jobs. Retail trade generally is a low-paying segment of the Yellowstone County,

segment of the Yellowstone County, Montana, and national economies.

About two-fifths of the retail payroll job increase—approximately 100 jobs per year—is projected to be in eating and drinking places (fast-food outlets, restaurants and bars).

Average 2000 wages in this sector were low at \$10,700, even if one added in tip income.

The motor vehicle dealers, parts and service stations retail trade sector is projected to increase by roughly 650 wage and salary jobs, with average wages of \$27,600. Most of the employment in this sector is not in gasoline

service stations, leading to higher than average wages. A major portion of the low-wage gasoline service stations and eating/drinking places industries serves out of state tourists and business travelers.

Other retail stores (e.g., sporting goods, used merchandise, drugstores and gift shops) serves both Montana residents and travelers to the state. The projected 1998 to

2008 payroll job increase for this retail sector is about 270 jobs. Average 2000 wages for other retail trade were \$16,000.

Wage and salary jobs in general merchandise stores, both discount and nondiscount, are projected to increase by about 250 over the 1998

to 2008 time period. Year 2000 annual wages were \$15,800.

Retail building materials stores are forecast to add 230 payroll jobs over the period, largely as the result of projected building construction activity. Year 2000 average annual wages were \$25,700. This is a higherwage component of retail trade. Other components of retail trade—home furnishings stores, clothing stores, and retail food stores—are projected to have smaller job increases. The increase for food stores is basically zero.

Wholesale trade jobs

Wholesale trade, which primarily provides services to businesses, is projected to increase by about 1,100 payroll jobs between 1998 and 2008. Because Billings is a wholesale trade center, this sector is relatively more important to Yellowstone County as compared with its role statewide. Its share of county payroll jobs is about twice its share statewide (10 percent vs. 5 percent). More growth is anticipated for the county's durable goods component, than the nondurable segment. Year 2000

average annual wages were about \$33,500, making wholesale trade one of the higher paying components of the Yellowstone County economy.

Construction jobs

Nearly all the growth in goodsproducing industries is projected to

be in the construction sector, which is forecast to grow by about 900 jobs between 1998 and 2008. Within construction, the growth area is in building construction—both general building contractors and special trade contractors (e.g., plumbing, heating and electrical)—with the

Nearly all the growth in goods-producing industries is projected to be in the construction sector.

Because Billings is a

wholesale trade center, this

sector is relatively more impor-

tant to Yellowstone County as

compared to its role statewide.

latter having the larger growth. Heavy construction is projected to increase slightly over the 1998 to 2008 time period.

Construction is a higher annual wage sector, with average Yellowstone County construction wages of \$32,400 in 2000. Heavy construction is the highest annual wage component at \$38,200. General building contractors and special trade contractors are at roughly the same level, with annual wages of \$29,000 and \$30,700, respectively.

Finance, insurance and real estate jobs

The high-paying (\$38,500) finance, insurance and real estate services industry is forecast to grow by about 700 payroll jobs, 1998-2008. Finance is projected to grow by approximately 400 jobs, mostly in its banking segment. Finance also includes securities brokers and services, the

highest paying segment of the Yellowstone County and Montana economies, paying about \$96,000 on average per job in Yellowstone County for 2000. Average pay for banking was more modest at \$32,500. Primarily driven by population change, the real estate sector should show an increase of around 200 wage and salary jobs. This is a lower-paying segment at \$18,900 for

2000. The insurance agents and services sector is projected to grow at about the overall county growth rate. No increase is projected for the small, relatively high-paying insurance carriers (\$43,800) segment.

Transportation, communications and utilities jobs

Transportation, communications and utilities services combined are projected to increase by about 670 payroll jobs. The railroad and pipeline sectors together are forecast to have an employment decline, which is also true statewide and nationally. Jobs in local transportation (includes school bus contractors); electric, gas and sanitary services; and arrangement of transportation services sectors are projected to be essentially flat. Year 2000 annual wages were about \$49,000 for electric, gas and sanitary services—a high-paying segment of the Yellowstone County and Montana economies. Local transportation and other transport services (arrangement

of transportation services) are lower-paying segments with 2000 annual wages at about \$17,400 and \$22,800, respectively.

The rest of this portion of the Yellowstone County economy is projected to have increased employment, led by the trucking and warehousing and communications sectors with projected increases of 360 to 370 wage and salary jobs. Average pay in 2000 was \$27,700 and \$34,600, respectively. The above average-paying air transportation sector will follow Montana and U.S. trends.

Government jobs

Most state government

sector job growth will be in the

state higher education compo-

nent of public education (MSU-

Billings), with Yellowstone

County following the statewide

trend for this segment of

the economy.

Between 1998 and 2008, government employment is projected to grow at about one-fourth the annual rate for the Yellowstone County economy as a whole (0.5 percent vs. 1.9 percent) for a total of 400 jobs. The growth rate for

the Yellowstone County government sector is similar to the Montana statewide growth rate of 0.6 percent. Nearly all job growth is projected for state government (380 jobs). Other segments of government are basically flat in terms of growth, with small increases in local government (including public education) and the U.S. Postal Service. Other federal government agencies are projected to

generally decline in employment over the period 1998 to 2008. The federal job decline is part of a national trend. The 2000 average wage per federal job was high at \$48,500.

Most state government sector job growth will be in the state higher education component of public education (MSU-Billings). Yellowstone County is projected to follow the statewide trend for this segment of the economy, with adult population growth and research contracts driving statewide employment increases. Year 2000 Yellowstone County state higher education wages averaged about \$27,700.

Noneducation state government is projected to increase by roughly 60 jobs 1998 to 2008, an annual growth rate of 0.9 percent.

Additional slow growth is projected for local public education (0.2 percent or 7 jobs per year). These jobs averaged \$27,300 for 2000, just above the county average.

Agriculture and forestry jobs

The agriculture and forestry segment of the goodsproducing portion of Yellowstone County's economy is largely agricultural services—including lawn, landscaping, and veterinary services rather than production agriculture (the raising of crops and livestock). Inciden-

tally, even though agricultural services is a service-type industry, it has historically been included with goods-producing industries because of its traditional tie to production agriculture. The smaller relative importance of production agriculture

for Yellowstone County is because Yellowstone is an urban rather than a rural county. In addition, a large part of Yellowstone County veterinary services consists of providing pet services to private households, rather than the more historical services to production agriculture. Forestry is a tiny part of the Billings area economy.

Production agriculture has experienced employment declines in payroll jobs for many decades in both Yellowstone County and Montana. Projected to continue, this decline is caused partly by the substitution of machinery and equipment (tractors, etc.) for labor. A decrease of 70 agricultural wage and salary jobs is projected for Yellowstone County 1998-2008. Year 2000 annual wages are not available, but 1999 wages for the sector were below average at around \$24,700. On the other hand, agricultural services is projected to increase by about 120 jobs in keeping with projected population increases. Average annual wages in this sector for 2000 were well below average at about \$17,600.

Mining jobs

The small Yellowstone County mining sector, which is almost entirely related to oil and gas extraction, is projected to increase slightly by about 40 jobs between 1998 and 2008. This increase in oil and gas jobs is in keeping with statewide and national projections. Mining jobs in Yellowstone County for 2000 were well paid at about \$48,300, on average.

Manufacturing jobs

Petroleum refining (products)

is projected to decline in

employment (not necessarily

in output) just like the

statewide industry.

Manufacturing is projected to be essentially flat over the period 1998 to 2008. The largest Yellowstone County manufacturing sector is petroleum refining (products). Yellowstone County has the vast majority of statewide employment for this sector. It is projected to

decline in employment (not necessarily in output) just like the statewide industry. Average annual wages for this sector were very high, about \$62,000 in 2000. The next largest manufacturing industry is food processing, which also is projected to

decrease in keeping with its statewide counterpart. Annual 2000 wages were above average at approximately \$31,200. The third largest industry, printing and publishing, also is expected to decline in employment. (Statewide this industry is projected to increase. The Yellowstone County projection differs from the statewide forecast because of the difference in the newspaper publishing subsector in Yellowstone County as compared with statewide.) Year 2000 average wages were about \$31,700. The other smaller Yellowstone County manufacturing sectors are forecast to increase in employment enough to counterbalance the projected decreases in the three largest components of Yellowstone County manufacturing. Overall, year 2000 manufacturing wages for Yellowstone County were approximately \$38,000.

Please refer to the table on the following two pages for projections for broadly-defined industries as well as about 85 specific industries. Additional detail on 150 Yellowstone County industries is available by contacting the Research and Analysis Bureau.

Wage and salary jobs by industry sectors

(NOTE: Numbers may not total due to rounding.)

Total nonagricultural wage and salary employment in Montana averaged 396,000 jobs for second quarter 2001—up 11,500 jobs over the quarter, and up 5,900 jobs over the year.

Mining averaged 5,400 jobs—up about 400 jobs over the quarter, and up about 300 jobs over the year, primarily in metal mining (other than gold, silver or copper), and oil & gas extraction.

Construction averaged 20,900 jobs—up seasonally about 3,700 jobs over the quarter, and also up about 500 jobs over the year. Almost all of the over-the-year growth was in special trade construction.

Manufacturing averaged 23,500 jobs—down about 600 jobs over the quarter, and down about 1,000 jobs over the year. About two-thirds of the over-the-year manufacturing drop was in lumber & wood products.

Transportation, communications & utilities (TCU) averaged 22,300 jobs-staving about the same over the quarter and over the year. Over the year, combination electric & gas utility was down about 200 jobs.

Trade jobs averaged 103,600 jobs—up about 3,500 jobs over the quarter, and up about 900 jobs over the year. Over the quarter, eating & drinking places was up about

1,800 jobs and building materials & garden supply stores was up 500. Over the year, department stores was up approximately 500 jobs and eating & drinking places was up about 400 jobs.

FINANCE, INSURANCE & REAL ESTATE (FIRE) averaged 18,400 jobs for the quarter—up about 400 jobs over the quarter, and up about 600 jobs over the year.

Services averaged 120,700 jobs—up approximately 4,500 jobs over-the-quarter, and up about 5,100 over the year. The largest over-the-quarter and over-the-year increases came in business services.

Total government averaged 81,200 jobs—down about 600 jobs over the quarter, and down about 400 jobs over the year. Federal government was down about 1,200 temporary 2000 Census jobs over the year.

Average weekly hours and earnings

Average weekly earnings for production workers averaged \$392.45 for second quarter 2001—up \$12.62 over the quarter, and up \$14.74 over the year.

Average weekly hours averaged 32.3—up seven-tenths of an hour over the quarter, and up about one-tenth of an hour over the year.

Average hourly earnings averaged \$12.15 for the quarter-up 13 cents over the quarter, and up 42 cents over the year.

Industry news from around the state

(Gathered primarily from state newspaper reports)

Agriculture

- Montana seed potato producers have given away, diverted for livestock feed or destroyed much of last year's crop because of a nationwide overproduction and plummeting wholesale prices. Some didn't plant a spring crop.
- ☼The grains and foods division of Minnesota-based CHS Cooperatives, Harvest States, has announced its intent to acquire the Montola Oilseed crushing facility in Culbertson. The Culbertson plant crushes about 300 tons a day of speciality crops such as safflower.

Mining

⇒Stillwater Mining Co. has filled some new jobs tied to its expansion with experienced narrow-vein, hard-rock miners from Idaho and South Dakota recently put out of work when mines closed in those two states. In other news, the Columbus-based palladium and platinum mining company is moving from the American Stock Exchange to the New York Stock Exchange.

Construction

- ⇔Construction is under way on a \$7.8 million addition to the Montana Women's Prison in Billings which will add 154 beds to the facility.
- ◆Work has begun on a commercial development south of Kalispell that will include a three-story office building, a small retail center with room for up to seven tenants, a stand-alone retail building and a Frugal's fast-food restaurant. The developer is Peak Development and Property Management.
- ⇔ Construction has begun on a Home Depot store north
 of Kalispell that will be the anchor store for the new
 Mountain View Plaza shopping center.
- Denefis hospital in Great Falls is building a \$4.4 million wellness center/health club that will have a lap pool, hot tub and therapy pool, racquetball and squash courts, aerobics room, gym, track, children's activity center and day care. It will be called Peak Health & Wellness Center.
- ➡Deaconess Billings Clinic has announced plans to build a \$2.6 million research facility in Billings' downtown medical corridor. The research facility is expected to be finished by spring 2002.

Manufacturing

- Columbia Falls Aluminum Co. has decided to extend its plant shutdown until fall of 2002, when a single potline (20 percent of the plant's production) will be started. Present plans call for running the plant at 50 percent capacity from Oct. 1, 2003 through Sept. 30. 2006, when a federal contract with the Bonneville Power Administration expires. Affected employees will continue to be paid full wages and benefits as they have been since the smelter shut down earlier in the year when the company decided it would be more profitable to sell previously-contracted-for electricity back to the Bonneville Power Administration than to use that electricity to manufacture aluminum. The plant's hourly employees have been working a modified, one-week on, one-week off schedule, while salaried employees have been working normal hours. A company spokesperson says the workers are keeping busy with training and maintenance projects, along with some capital improvements.
- ⇔A financial aid package has been finalized to keep Seeley Lake's Pyramid Lumber Co. operating—and its 100 employees working. New equipment is intended to help the mill make wood products more cheaply with a wider variety of lumber grades. The package includes community development block grant funds, a loan from the Missoula Area Economic Development Corp. and a loan from philanthropists Liz Claiborne and Art Ortenberg.
- ⇔American Chemet Corporation has announced it will expand by 40 to 50 percent over the next five years to meet new demand in the marine anti-fouling paint business. The East Helena-based firm specializes in manufacturing the key ingredient in a nontoxic paint for boat bottoms that prevents barnacles from attaching. Its president says the firm has not decided yet if the expansion will take place in East Helena, on the East Coast or in Canada.
- Dore Corp. has filed for Chapter 11 bankruptcy protection following financial losses in fourth-quarter 2000 and first-quarter 2001. Jore's president and CEO says the Ronan-based hand tool and power tool accessory manufacturer will either find an appropriate partner or buyer, or will position itself financially so it can continue to operate.

- ⇒Two North Carolina men have purchased the Great Harvest Bread Co., but the bread franchise will remain headquartered in Dillon, thanks in part to a \$3.4 million loan package from the Montana Board of Investments.
- ➡The Plum Creek Timber Co. plant in Pablo went back to full production on two shifts June 1, allowing 140 employees whose hours had been cut back earlier in the year to return to full-time work.
- ⇔Crowder Lumber Co. has purchased the former Berg Lumber Co. sawmill in Lewistown through federal bankruptcy court.
- Color World Printers of Bozeman has acquired Yellowstone Printing & Design, with offices in Billings and Cody, Wyo.

Transportation, Communications & Utilities

⇔The Western SynCoal demonstration plant near Colstrip closed in May. The demonstration facility was built in 1993 to clean contaminants out of coal and outlived its estimated five-year life by several years. It employed 24 workers.

Trade

- Sidney's restaurant has closed in Billings.
- ⇒Hardee's Restaurant has closed in Butte.

Services

- ⇔First Nationwide Mortgage Corporation has announced it will add another 30 employees to its customer service call center in Great Falls with the addition of loan origination services. Loan origination center employees will handle both inbound and outbound calls to customers interested in purchasing a home or refinancing an existing mortgage.
- ⇔SatoTravel has announced plans to open a travel arrangement call center in Butte that might eventually employ as many as 200 people. Based in Arlington, Va., SatoTravel specializes in providing travel management services to government agencies and large corporations. It already has call centers in Virginia, Washington, Minnesota, Texas and the United Kingdom. Plans call for Sato to be located in the Sears Building, which is being renovated with Montana Board of Investments Infrastructure Program funds. Sato was recently acquired by Denver-based Navigant International.

- ⇒S&K Technologies (SKT) in Pablo has obtained a contract as a logistics contractor for the U.S. Air Force. Its job is to make sure F-15 aircraft sold to Saudi Arabia and other countries get repaired efficiently. Using computers equipped with specialized software developed by Tamsco Manufacturing (which has a manufacturing and service facility in Polson), SKT employees contract for parts with vendors around the world and also arrange for payment. SKT is an information technology firm owned by the Confederated Salish and Kootenai Tribes. According to SKT's president, a service contract is included in the sale price of U.S. aircraft sold to other countries.
- Department Department
- Morrison-Maierle Inc., a Helena consulting engineering firm, has acquired Lay of the Land Surveying in Helena.
- ⇔Prairie Vista Manor nursing home has closed in Big Sandy.
- ⇔Community Hospital and Nursing Home in Anaconda has negotiated a management agreement with Missoula's St. Patrick's Hospital. Also included in the management agreement are Pintler Home Health, Pintler Home Oxygen, Anaconda Internal' Medicine and the Anaconda Community Medical Clinic.
- ➡Glasgow's Frances Mahon Deaconess Hospital has purchased the Glasgow Clinic.

Government

⇔Federal emergency grants are being used in Montana to help hundreds of laid-off lumber, mining and manufacturing workers train for and find new jobs.

Information used in the preceding industry briefs was gathered primarily from state newspaper reports.

^{*} A single-county Metropolitan Statistical Area (MSA) is determined by the U.S. Office of Budget and Program Planning and must have a central city with a population of 50,00 or more. Single-county MSAs are named after their central cities. Billings and Missoula MSA employment is produced by the Montana Department of Labor and Industry for use as a state economic indicator.

THE CONSUMER PRICE INDEX (CPI) IS A MEASURE OF THE AVERAGE CHANGE IN THE PRICES PAID BY URBAN CONSUMERS FOR A FIXED MARKET BASKET OF GOODS AND SERVICES. THE CPI IS CALCULATED MONTHLY FOR TWO POPULATION GROUPS. ONE CONSISTING ONLY OF THE URBAN HOUSEHOLDS WHOSE PRIMARY SOURCE OF INCOME IS DERIVED FROM THE EMPLOYMENT OF WAGE EARNERS AND CLERICAL WORKERS (CPI-W). AS NEW USES WERE DEVELOPED FOR THE CPI IN RECENT YEARS, THE NEED FOR A BROADER AND MORE REPRESENTATIVE INDEX BECAME APPARENT. THE ALL-URBAN CONSUMER INDEX (CPI-U), INTRODUCED IN 1978, IS REPRESENTATIVE OF THE 1982-84 BUYING HABITS OF ABOUT 80% OF THE MONINISTITUTIONAL POPULATION, COMPARED WITH 12% REPRESENTED IN CPI-W.

SOURCE FOR DATA. SEE TECHNICAL NOTE S-6 ON "SOURCES OF DATA" PAGE AT BACK OF THIS PUBLICATION.

Note: The Bureau of Labor Statistics has begun using a new formula for calculating the basic components of the CPI-U and the CPI-W effective with the data starting January 1999.

Source This table was prepared by the Montana Department of Labor and Industry, Research and Analysis Bureau. Unemployment Insurance claims and payments data was derived from the ETA 5-155 (Employment and Training Administration Claims and Payment Activities) report. Trust Fund Growth data was derived from the ETA 5-112 (Employment and Training) Administration Unemployment Insurance Financial Trainsaction Summary report.

Glossary of terms

- 1. <u>Civilian Labor Force</u> the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
- 2. Employed those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working, had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
- 3.<u>Unemployed</u> those persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
- 4. Unemployment Rate the number of unemployed expressed as a percent of the civilian labor force.
- 5. Residence Data a count of people by where people live.
- 6. Establishment Data a count of jobs by where people work.
- 7. Seasonally Adjusted Labor Force Series to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-11 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.
- 8.<u>MSA</u> Metropolitan Statistical Area as determined by the Office of Management and Budget. The MSA must have a central city with a population of 50,000 or more.
- 9.LFA Labor Force Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.
- 10.LWIA The enactment of the Workforce Investment Act (WIA) of 1998 is the first wholesale reform of the nation's job training system in more than 15 years. Montana's State Workforce Investment Board was created by the Governor in response to this Act and its first task was to certify the local workforce investment areas (LWIA), which are guided by local workforce investment boards (these local boards replaced JTPA's Private Industry Councils). The 2 LWIAs for Montana are known as Rural Concentrated Employment Program, or CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties), and Balance of State (the other 46 counties).
- 11.BENCHMARKING It is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In the case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month to month changes in the level.
- 12. <u>CES-790 Program</u> current employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state. Because this information comes from a survey of employers, persons who work for 2 different companies would be counted twice. Thus, nonagricultural employment is actually a count of the number of jobs filled, rather than the number of persons employed.

Sources of data

- S-1.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics (BLS). LAUS data (Local Area Unemployment Statistics program) is adjusted to the Current Population Survey benchmark and is the official BLS approved series that is used to allocate federal funds and determine eligibility for federal assistance programs. This series represents employment and unemployment by place of residence, and is not comparable to the place-of-work industry employment series (CES data). LAUS data is calculated for the week that includes the 12th of the month. Workers involved in labor disputes are counted as employed. Total employment in the labor force also includes agricultural workers, unpaid family workers, domestic workers and the self-employed.
- S-2.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau. The unadjusted unemployment rate is prepared by the LAUS program in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. The seasonally adjusted rate is an unofficial series, and is provided only for use as a state economic indicator.
- S-3.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from LAUS data. Data for Service Delivery Areas and Labor Force Areas is calculated from the official data series by summing up employment and unemployment for the appropriate counties involved, and calculating an unemployment rate from the summed data for each area.
- S-4.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. Data from the CES (Current Employment Statistics) program represents nonagricultural wage and salary employment by place of work, and covers full-time and part-time employees who worked during, or received pay for, the payroll period that includes the 12th of the month. The data excludes the self-employed, volunteers, unpaid family workers and domestic workers. Persons on sick leave, vacations, or holidays (and being paid for that period by their employer) are considered employed. Payroll and worker hour data is collected for production and related workers in manufacturing industries, nonsupervisory workers in private service-producing industries, and construction workers in construction industries. The earnings figures are "gross" figures—that is, they reflect changes in wage rates, shift differentials and premium pay for overtime work. The hours figures relate to the hours for which pay was received, which is different from scheduled or standard work hours.
- S-5.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from a survey of Business Establishments as part of the BLS-790 Program. Information on women workers is computed as a ratio of all employees of the Current Employment Statistics, and is produced for informational purposes only.
- S-6.) Tabulations produced by the U.S. Department of Labor's Bureau of Labor Statistics, and reprinted by the Montana Department of Labor and Industry's Research and Analysis Bureau for informational purposes only. This is a national data series because Montana data is not computed separately.

850 copies of this public document were published at an estimated cost of \$2.35 per copy, for a total cost of \$1,997.50, which includes \$1,343.00 for printing and \$654.50 for distribution.
